

ComEd's Environmental Disclosure Statement

The disclosure of this information is required under Section 16-127 of the Electric Service Customer Choice and Rate Relief Law of 1997 and the rules of the Illinois Commerce Commission, 83 Ill Adm. Code 421.

Sources of Electricity Supplied for the 12 months ending September 30, 2002	Percentage of Total
Biomass power	0%
Coal-fired power	30%
Hydro power	0%
Natural gas-fired power	2%
Nuclear power	65%
Oil-fired power	0%
Solar power	0%
Wind power	0%
Other resources	0%
Unknown resources purchased from other companies	3%
TOTAL	100%

Sources of Electricity Supplied for the 12 months ending September 30, 2002

AVERAGE AMOUNTS OF EMISSIONS and AMOUNT OF NUCLEAR WASTE per 1000 kilowatt-hours (kWhs) PRODUCED from KNOWN[‡] Sources for the 12 months ending September 30, 2002	
Carbon dioxide	657.19 lbs.
Nitrogen oxides	1.16 lbs.
Sulfur dioxide	1.43 lbs.
High level nuclear waste	0.0042 lbs.
Low level nuclear waste	0.0001 cubic feet

[‡]3% of the total electricity supplied was purchased from other suppliers and the amounts of emissions and amount of nuclear waste attributable to producing this electricity is not known and is not included in this table.

Additional information on companies selling electrical power in Illinois may be found at the Illinois Commerce Commission's World Wide Web site; www.icc.state.il.us.

The electric industry restructuring law passed in 1997 by the Illinois General Assembly provides many benefits for all customers. As part of this law electric utilities and suppliers are providing an Environmental Disclosure Statement for the twelve months ending every quarter.

The information on this statement shows the breakdown of the different sources that generated electricity for ComEd customers and the average amounts of emissions and nuclear waste produced, between 10/01/01 and 9/30/02.

For comparison purposes, the following shows the Midwest states' (Illinois, Wisconsin, Michigan, Ohio and Indiana) electric utilities averages for sources of electricity generation and emissions for 1999.* 65 percent of ComEd's electricity is generated by nuclear power, and another 2 percent is generated by natural gas-fired power. Both nuclear power and natural gas-fired power have lower emissions of carbon dioxide, nitrogen oxides and sulfur dioxide than coal-fired generation. Because of that, our emission rates are 60% less than the regional average for carbon dioxide, 82% less for nitrogen oxides, and 88% less for sulfur dioxide.

(Midwest Sources—rounded to the nearest whole percent)

Coal-fired power	75%
Hydro power	1%
Natural gas-fired power	1%
Nuclear power	22%
Oil-fired power	1%
Renewables	less than 1%
(includes geothermal, biomass, wind, solar, thermal and photovoltaics)	

(Midwest Emissions—pounds per 1000 kilowatt-hours)

Carbon dioxide	1,647.07 lbs.
Nitrogen oxides	6.35 lbs.
Sulfur dioxide	11.87 lbs.

Simple Things Can Help Save Energy

Even in the midst of winter, you can still make your home more energy efficient. Whether you live in a home or an apartment, you can save money on your energy bills and help the environment by just following these easy tips:

- Inspect the insulation between heated and unheated areas. Insulation is the single most important energy saving measure. It deteriorates over time and occasionally needs to be reinforced.
- If it wasn't done before winter, replace the filter in your heating system. Dirty filters block airflow and force equipment to work harder, increasing operating costs and causing damage.
- Set thermostats at a constant, comfortable level – 68 to 70 degrees. Each additional degree you lower your thermostat can save you up to three percent of the cost to heat your home.
- Open blinds and curtains during the day to take advantage of sunlight.

Visit www.ComEdwinter.com for more suggestions on ways to save energy during the winter. Saving energy can also help reduce pollution – making a better environment for everyone.
